

Saifullah Khan

Python Backend Engineer

saifullahkhank66@gmail.com | linkedin.com/saifullah-khan | github.com/saifullahkhancs

03007117755 | Lahore, Pakistan

Summary:

Backend Software Engineer with experience developing Python-based applications, REST APIs, data pipelines, and microservice-oriented systems. Skilled in backend and database architecture, API design, and data ingestion workflows across relational and NoSQL systems. Currently building LinkeFlow and Job Easy which are independent automation platforms, while deepening expertise in scalable system design.

Professional Experience:

Software Engineer (Aug 2024 – Jan 2026)

Technogenics — Lahore, Pakistan

- Developed and maintained Python backend services and RESTful APIs using Flask and FastAPI within a microservice-based architecture.
- Maintained a CMS built on Django REST Framework and **React**, backed by MongoDB and Neo4j, used by the internal team to manage and publish data spanning millions of URLs, IPs, and domains, plus thousands of ransomware, malware and threat actor records. Worked hands-on with Django ORM and the admin panel.
- Built and maintained REST APIs, GraphQL endpoints, and Kafka consumer pipelines for automated data ingestion and processing across 4 databases (MySQL, MongoDB, Elasticsearch, Neo4j).
- Developed and customized Scrapy crawlers which run every week to collect and process the PSIRT advisories data for our intel system.
- Worked with Docker-based development environments for building, running, and debugging backend services.
- Collaborated with cross-functional teams to support scalable backend systems in production environments.

Associate Software Engineer (Oct 2023 – Aug 2024)

DSME Global Links — Lahore, Pakistan

- Developed and maintained backend web and mobile application using ASP.NET, C#, and MySQL.
- Contributed to workflow-driven features including scheduling, reporting, booking, and user management modules.
- Performed API testing and validation using Postman and custom Python scripts to verify functionality and ensure reliability.
- Collaborated directly with clients to gather requirements and translate business needs into technical solutions.

Research Engineer (Aug 2022 - Aug 2023)

Valyrian System Incorporation

- Conducted research on high-performance packet processing using XDP and DPDK in Linux environments.
- Evaluated network performance and throughput using tools such as iperf, TRex, and mpstat.
- Participated in experiments demonstrating packet filtering and rerouting at multi-million packet throughput.
- Studied Linux networking internals, packet processing pipelines, and system performance optimization techniques.

Technical Skills:

Backend: - Python, Flask, FastAPI, Django REST Framework, GraphQL , Scrapy, Pydantic

Databases: -MySQL, PostgreSQL, Elasticsearch, Redis , Neo4j

Messaging & Realtime: - Kafka

Frontend: - Javascript , React, HTML/CSS

Tools : -Git, Linux, Docker, Postman

Concepts: -OOP, Microservices, Design Patterns, API Design, MVT/MVC/Clean Architecture

Familiar With: - Kubernetes, Azure, Celery, Playwright

Projects:

LinkeFlow — LinkedIn Automation Platform (Personal/Freelance Project):- (May 2026 – Present)

- Designed and built a backend automation platform (FastAPI, Celery, Redis, PostgreSQL, Playwright) that schedules and executes LinkedIn actions with human-mimicking browser behavior and per-account rate limiting.
- Implemented JWT auth with RBAC, AES-256-GCM credential encryption, and a Redis-backed daily action limiter. Deployed on Azure VM with Nginx and systemd.
- Used AI-assisted development tools (Gemini Code Assist, GitHub Copilot, Claude) to accelerate prototyping, detect vulnerabilities, and improve code quality across the stack.

Job Easy — Job Application Automation Platform (Personal Project) :-

- Built a job-application automation platform with a FastAPI backend and React/Vite frontend, using SQLAlchemy and Alembic for data modeling and migrations. Implemented JWT-based auth and a role-based approval workflow (visitor → customer → admin) controlling access to email-sending features, with encrypted storage of user email credentials.

Strike Ready Application:-

- Contributed to backend services and data ingestion workflows within a cybersecurity intelligence platform. Managed data ingestion from crawler systems, different databases and research sources into Elasticsearch, Neo4j. Assisted in maintaining backend workflows and data pipelines across multiple microservices.

Online Order Management System (OOMS):- (Mar 2026 – Apr 2026)

- Designed scalable architecture for an online food ordering system using .NET10 and Clean Architecture. Implemented authentication and authorization mechanisms. Applied role-based access control (RBAC) to manage user permissions.

Social Media Platform (Twitter Clone):-

- Developed a Twitter-like web application using Flask, JavaScript, and MySQL. Implemented features including user authentication, tweets, likes, sharing, and follow functionality. Designed clean UI layouts and basic animations to improve user experience.

Education:

Namal University, Mianwali (Jul 2019 – Aug 2023)

Bachelor of Computer Science

- **CGPA:** 3.42/4.0
- **Coursework:** Artificial Intelligence, Machine Learning, Database Management, Software Engineering, Computer Networks, Operating Systems, Data Analysis, Human Computer Interaction
